## Site Assessments

### Pond 1

#### Comments:

Normal Growth Observed

Planting is to occur in the Spring to fill in some areas without Florida native aquatic plants. These plants help filtrate the water, stabilize banks, reduce wave induced erosion and provide native habitat for fish and waterfowl.

### Pond 2

#### Comments:

Site Looks Good

No action required.

## Site Assessments

### Pond 3

#### Comments:

##### Treatment In Progress

Bluegreen algae was in bloom and wind blown in the corner. When blooms get large enough, the lake can emit foul smelling odors. I followed up on 2.23 and the algae treatment from 2.4 was successful.

### Pond 4

#### Comments:

##### Treatment In Progress

Planting is to occur in the Spring to fill in some areas without Florida native aquatic plants. These plants help filtrate the water, stabilize banks, reduce wave induced erosion and provide native habitat for fish and waterfowl. Algae was treated with an algicide.

## Site Assesments

### Pond 5

#### Comments:

Normal Growth Observed

Planting is to occur in the Spring to fill in some areas without Florida native aquatic plants. These plants help filtrate the water, stabilize banks, reduce wave induced erosion and provide native habitat for fish and waterfowl. Boat was launched to target Torpedograss on the backside of the Cattails.

### Pond 6

#### Comments:

Treatment In Progress

Planting is to occur in the Spring to fill in some areas without Florida native aquatic plants. These plants help filtrate the water, stabilize banks, reduce wave induced erosion and provide native habitat for fish and waterfowl. Algicide was applied to the algae.

## Site Assesments

### Pond 7

#### Comments:

Treatment In Progress

Planting is to occur in the Spring to fill in some areas without Florida native aquatic plants. These plants help filtrate the water, stabilize banks, reduce wave induced erosion and provide native habitat for fish and waterfowl.

### Pond 8

#### Comments:

Treatment In Progress

Planting is to occur in the Spring to fill in some areas without Florida native aquatic plants. These plants help filtrate the water, stabilize banks, reduce wave induced erosion and provide native habitat for fish and waterfowl. Hydrilla is showing in the lake. We will monitor and treat when appropriate.

## Site Assesments

### Pond 9

#### Comments:

Site Looks Good

No action required.

### Pond 10

#### Comments:

Site Looks Good

No action required.

## Management Summary

1. Planting is to occur in the Spring to fill in some areas without Florida native aquatic plants. These plants help filtrate the water, stabilize banks, reduce wave induced erosion and provide native habitat for fish and waterfowl.
2. No action required.
3. Bluegreen algae was in bloom and wind blown in the corner. When blooms get large enough, the lake can emit foul smelling odors. I followed up on 2.23 and the algae treatment from 2.4 was successful.
- 1,4,5,6,7,8. Planting is to occur in the Spring to fill in some areas without Florida native aquatic plants. These plants help filtrate the water, stabilize banks, reduce wave induced erosion and provide native habitat for fish and waterfowl.
- 9 and 10. No action required.

## Recommendations/Action Items

- Pond 1,4,5,6,7,8) Advanced Aquatic will prep planting areas for the Spring.  
Pond 8) Monitor Hydrilla and treat as necessary next month.
